Taking Care of Your Product

Thank you for choosing a BrassArt product.
Please read the following information on taking care of
your product.

This product has been coated with either a good hard wearing lacquer, has been electro-plated or had a wax finish applied.

It is imperative that under no circumstances should metal polish or abrasive cleaners be used, otherwise the protective coating will be damaged and cause early discoloration.

Regular dusting with a soft cloth or fine camel hair brush supplemented by an occasional washing with warm soapy water should keep the article in good condition. Ensure any liquid is fully dried off to prevent water marks.

If your product is un-lacquered or finished in one of our living finishes, it will naturally age over a period of time. You can have your product/s re-polished or re-finished should you wish.

FOR ARTICLES FITTED ON EXTERNAL DOORS

All external door furniture supplied by Brassart has been coated with either an Electro-phoretic or external grade Incralac lacquer.

Under no circumstances should any chemical or abrasive cleaning products be used as they will strip the coating and all warranties will null and void. Regularly wiping down with warm water and a soft cloth will remove any trace of surface impurities, salt etc. and help to maintain the protective coating for many years.

SCRATCHES OR MARKS WILL AFFECT THE PROTECTIVE COATING. YOUR PRODUCT WARRANTY MAY ALSO BE AFFECTED.

THIS LEAFLET MUST BE LEFT FOR THE OCCUPIER OF THE PROPERTY

NB: The life of lacquer is beyond the control of the manufacturers and as such cannot be guaranteed. After prolonged exposure to atmospheric conditions the lacquer finish may break down. Should this occur any trace of lacquer may be removed by the application of a good quality paint stripper used according to the manufacturer's instructions. This will leave the item in a condition to be cleaned with a metal polish or other similar cleaners.
